EDUCATION

University of Waterloo

Candidate for Bachelor of Computer Science, Co-op (**GPA: 3.9**)

Sep 2021 – Apr 2026 (expected)

Waterloo, Ontario

EXPERIENCE

AMD

Jan 2025 – Present

Software Engineer Intern

Toronto, Ontario

- Engaged in the development of the AMD Advanced Media Framework using **C++**, focusing on audio and video **machine learning** applications.

Huawei

May 2024 – Aug 2024

Compiler Engineer Intern

Toronto, Ontario

- Enhanced loop tiling **compiler optimization** in **LLVM** using **C++**, successfully incorporating it as a default pass and boosting runtime performance of **high-performance computing** workloads by up to **7%**.
- Implemented an **LLVM** compiler pass in **C++** to optimize high-bandwidth memory allocation in **multithreaded** programs by leveraging **IR** pointer analysis, reducing memory contention by as much as **60%**.
- Integrated **profile-guided optimization** into the pass using cache miss data from the **perf** tool to further improve program throughput.

WSIB Innovation Lab

Sep 2023 – Dec 2023

Compiler Engineer Intern

Waterloo, Ontario

- Architected a **generative AI** tool to enable conversational interaction with **SQL** databases.
- Leveraged the unique strengths of different quantized and finetuned **LLMs** using **Python** and **LangChain** to achieve **parity with GPT-4** in database QA, effectively addressing OpenAI data privacy concerns.
- Deployed the AI to **Azure VMs** and presented the success to a **150-person audience** in the CBIA branch.

Infinera

Sep 2022 – Dec 2022

Firmware Engineer Intern

Ottawa, Ontario

- Created a CLI API in **C++** using **erPC** to enable low-level runtime reconfiguration of digital subcarriers, **eliminating a 10-minute recompile time** for developers.
- Utilized the Atlassian API, **Pandas** and **Matplotlib** in **Python** to display real-time graphical data of production build data from **Jenkins** CI on a confluence page, allowing the team to identify and fix resource inefficiencies on hardware limited to 32MB of memory.

University of Waterloo

Jan 2022 – Apr 2022

Course & Technical Support Assistant

Waterloo, Ontario

- Engineered a **JavaScript** algorithm to process **1000s** of raw Sentinel-1 arctic satellite RADAR images in Google Earth Engine to determine melt/freeze onset dates for lakes and rivers in Canada.

PROJECTS

Sorting Algorithm Visualizer 🔄👁

- Developed an interactive visualizer of **six** popular sorting algorithms using **React** and **Material UI**.

Realm Tunes 🎵

- Created a feature-rich Discord music bot using **Python** and the Discord.py API.
- Deployed Realm Tunes to an **Ubuntu** server, providing on-demand music to **350 users** across **seven servers**.

SKILLS

Languages: C/C++, Python, JavaScript, TypeScript, Java, Kotlin, HTML/CSS, SQL, Assembly, VHDL

Technologies: Git, LLVM, Docker, Perf, PostgreSQL, SQLite, Firebase, Jenkins, Azure, Jira
